

RAJASHEKAR ALLURI

QA Automation Engineer • SDET

shekarus28@gmail.com | [rajashekarreddy4848.github.io](https://github.com/rajashekarreddy4848)

SUMMARY

QA Automation Engineer with 6+ years of experience across manual and automated testing. I build Playwright, Selenium, and Protractor frameworks, validate REST APIs with Postman, and integrate automated regression into CI/CD pipelines. I use GitHub Copilot and Claude AI to move faster without cutting corners on quality.

EXPERTISE

- Manual & Functional Testing — Functional, Regression, Exploratory, Integration, System, Cross-Browser, UAT
- Test Automation — Playwright, Selenium WebDriver, Protractor, Appium, Cucumber (BDD), Page Object Model
- API & Performance — Postman, REST Assured, REST API Testing, JMeter
- CI/CD & DevOps — Azure DevOps, CI/CD Pipelines, Jenkins, Git
- AI-Assisted Engineering — GitHub Copilot, Claude AI
- Languages & Tools — Java, JavaScript, TypeScript, Python, MySQL, Jira, GitHub

EXPERIENCE

Sr QA Automation Engineer

Aug 2024 – Present

D&C Info LLC

- Implemented a modern end-to-end testing framework using Playwright, leveraging auto-wait and network interception to reduce test flakiness compared to legacy Selenium suites.
- Used Playwright's Codegen and Trace Viewer to rapidly develop and debug complex user flows, reducing script development time alongside GitHub Copilot workflows.
- Designed cross-browser execution suites for Chromium, Firefox, and WebKit, ensuring consistent application behavior across all modern rendering engines.
- Configured Playwright test runner with custom configurations, including parallel execution, retries, environment-based base URLs, and CI/CD integration for GitHub Actions/Azure DevOps.
- Utilized GitHub Copilot in VS Code to write automation scripts, generating test scripts efficiently and reducing development time.
- Leveraged GitHub Copilot to accelerate framework development, code review, and test generation.

QA Automation Test Engineer

Mar 2020 – Mar 2023

Scriptbees IT Pvt Ltd — Tech Mahindra client engagement, Mindspark (AI-powered adaptive learning platform, K-10)

- Developed and maintained end-to-end test scripts using Protractor and Jasmine for Angular-based applications.
- Implemented Page Object Model (POM) to enhance test maintenance and reusability.
- Automated functional and regression testing for Lite and Standard user tiers across student grades and profiles.
- Automated authentication flows — login, text/picture password, no-password, reset, and change-password workflows.
- Performed REST API testing with Postman on backend microservices (GetSchoolSettings, GetClassUsageReport, DownloadClassUsageReport), covering payloads, status codes, and business data.
- Ran positive and negative API testing to validate parameter handling, missing data, and error responses.
- Correlated UI behavior with backend API responses to catch data-consistency defects; tracked regression and defect resolution in JIRA across staging and live environments.

Junior QA Engineer

Jan 2019 – Feb 2020

Scriptbees IT Pvt Ltd

- Wrote manual test cases and ran regression, integration, and UAT cycles across QA, staging, and production builds.

Project 1 – VolunteerMark (Volunteer Management Platform)

- Performed end-to-end manual and automation testing for VolunteerMark, a volunteer management platform used by nonprofits and schools for recruiting, scheduling, and hour tracking.
- Developed and maintained Selenium WebDriver automation scripts (Java) to automate critical workflows — registration, login, profile management, event signup, and volunteer scheduling.
- Designed automated test cases using Page Object Model (POM) to improve reusability, maintainability, and execution efficiency.
- Validated volunteer check-in/check-out, service-hour tracking, shift assignment, and cancellation scenarios through both manual and automated testing.

- Integrated the Selenium automation suite with Jenkins CI/CD pipelines to trigger automated regression runs on every build, cutting manual regression effort and shortening release turnaround time.

Project 2 – Kite Assessments (Assessment Platform)

- Automated authentication, portal navigation, and assessment execution workflows using Selenium WebDriver (Java) and reusable POM components.
- Performed manual smoke, sanity, functional, and regression testing across student and educator roles, validating field-level rules and error handling.
- Investigated automation failures with developers and tracked defects through the full lifecycle, including regression validation of fixes.
- Performed mobile application testing using Appium for cross-platform automation, covering core app functionality and user flows on Android devices.
- Used Android Studio for emulator/device setup, debugging, and validating app behavior across different Android versions and screen sizes.
- Ran cross-browser validation on BrowserStack and Sauce Labs across both projects.

EDUCATION

Master of Science, Computer Science

Rivier University, Nashua, NH

Bachelor of Science, Computer Science

Satavahana University, Telangana, India
